

Fabricio Rojas

Full Stack Developer

Costa Rica · Remote · fgrr12@gmail.com · github.com/fgrr12 · linkedin.com/in/fabricio-rojas · fgrr12.github.io/my-portfolio

PROFILE

Full Stack Developer with 8+ years shipping web and mobile products end to end, across two stacks that rarely appear on the same CV: JavaScript/TypeScript (React, Angular, Node) and .NET (C#, Minimal APIs, EF Core, Blazor, MAUI). Currently building access control and security systems for a university campus and for industrial sites. Also run a livestock platform of my own where a voice assistant turns spoken updates into structured records using Whisper and schema-constrained LLM output.

EXPERIENCE

Full Stack Developer (contract) · Accesos Automáticos S.A.

Oct 2025 – Present

- Built the entire web frontend for the access control platform at EARTH University, and co-owned its backend, database design and IIS deployment.
- Delivered the INTACO carrier registry end to end: a Blazor WebAssembly portal over a .NET Minimal API, plus an Android app that scans ID documents at gate points.
- Rebuilt the visitor registry frontend with server-side rendering and live updates across screens over SignalR.

Product Development · Independent

Oct 2024 – Sep 2025

- Built and shipped a multi-tenant livestock management platform end to end — frontend, backend, database and the AI layer — now running in production on a working farm.
- Designed its voice pipeline: spoken updates transcribed with Whisper, then parsed into typed farm actions by a schema-constrained LLM, so field staff never fill in a form.

Full Stack Developer · Qubo Systems

Jul 2022 – Sep 2024

- Led ongoing development of Serena, a childcare platform: took full ownership of an existing production application, built Angular and React Native features, improved backend performance and security on Express and Firebase, and added in-app messaging for real-time updates.
- Built a finance module as a microservice for a condominium platform — a React interface embedded in an Angular back office, contributing over half of its UI, with PostgreSQL tables designed for per-property financial operations.
- Across the wider condominium ecosystem (Angular/Ionic frontends, several Express APIs, Firebase messaging, PostgreSQL on AWS): improved query performance, added internationalisation and shipped features on both the mobile app and the back office.

Full Stack Developer · CoBuild Lab

Sep 2021 – Apr 2022

- Led development of BitBasel, an NFT marketplace on Stacks (Next.js, Styled Components, Hiro Wallet), owned its architecture and supervised a junior developer through the implementation.
- Built custom endpoints and internal logic for Pivot Market, a published platform for booking retail space in malls, integrating Stripe for payments and Cypress for testing.
- Shipped user-facing features for Candid Travel Ventures, a travel booking app for the Texas market, during the final stages before launch (8Base, Next.js, Stripe, Material UI, SendGrid).

Frontend Web Developer · GBM as a Service

Oct 2017 – Dec 2020

- Worked in a cross-functional Agile Scrum team of designers, developers, QA, product owners and project managers.
- Built an internal resume management system with Angular and Firebase that streamlined CV tracking and staffing for upcoming projects.
- Led my graduation thesis inside the company: a KPI dashboard in AngularJS integrating backend services, giving real-time visibility of project performance through interactive charts.

SELECTED PROJECTS

EARTH University — Campus Access Control

2026 – present

Access control and security platform for a university campus: who enters, with which credentials, on what schedule.

Accesos Automáticos · Angular 21, C# .NET 10, EF Core, SQL Server, Avalonia, SignalR, IIS

Visitor Registry

2026

Second-generation visitor check-in and reporting system for corporate sites.

Accesos Automáticos · Angular, SSR, SignalR, ExcelJS, C# .NET, SQL Server

INTACO Carrier Registry

2025 – 2026

Carrier registration and gate access control, with ID-document scanning on Android.

Accesos Automáticos · Blazor WebAssembly, C# .NET 10, Minimal APIs, EF Core, .NET MAUI, SQL Server

Lyra — Synced Lyrics Overlay

2026

A transparent desktop overlay that reads whatever the OS is playing and shows time-synced lyrics.

Personal Project · Tauri v2, Rust, React 19, TypeScript, Tailwind 4

Freelance Finance Tracker

2026

Time tracking, invoicing and expense reporting for freelance work, with a client portal.

Personal Project · React 19, TypeScript, TanStack Router/Query, Supabase, Python

Broiler Farm Management

2026

Offline-first mobile app for running a broiler chicken farm under an integrator contract.

Personal Project · Expo, React Native, TypeScript, Drizzle, SQLite, Supabase, TanStack Query

Farm Management System

2024 – present

Multi-tenant livestock platform with a voice assistant that turns spoken updates into structured farm records.

Personal Project · React 19, TypeScript, Firebase Functions, Firestore, OpenAI, Zod, PWA

Condo Financial Management Microservice

2024

A financial tracking microservice for condominium administration.

Qubo Systems · React 19, TypeScript, Express, Firebase Functions, PostgreSQL, Zustand

Condominium Platform — Ongoing Development

2025 – present

Continued development of the condominium platform after its owners brought the work in house.

Accesos Automáticos · Angular, Nx, Node.js, Express, React Native, Expo, PostgreSQL, Firebase

Condominium Management Platform

2023 – 2024

A platform for managing condominium permissions and internal services.

Qubo Systems · Angular, Ionic, Express.js, PostgreSQL, Firebase

Serena: Nanny Service Platform	2022
A mobile and web platform for booking and managing nanny services.	
Qubo Systems · Angular, React Native, Firebase, Express.js	
BitBasel — NFT Marketplace	2021 – 2022
An NFT marketplace built on Stacks, with wallet-based identity instead of accounts.	
CoBuild Lab · Next.js, React, Styled Components, Hiro Wallet, Stacks	
Candid Travel Ventures — Travel Booking	2021 – 2022
Travel booking app for the Texas market, joined in the final stages before launch.	
CoBuild Lab · 8Base, GraphQL, Next.js, React, Stripe, Material UI, SendGrid	
Pivot Market — Retail Space Booking	2021 – 2022
A published platform for booking retail space inside shopping malls.	
CoBuild Lab · Bubble, Stripe, Cypress	

SKILLS

LANGUAGES	TypeScript, JavaScript, C#, Rust, Python, SQL
FRONTEND	React, Next.js, Angular, Blazor WebAssembly, Redux, Zustand, Tailwind CSS
MOBILE & DESKTOP	React Native, Expo, Flutter, .NET MAUI, Avalonia, Tauri, PWA
BACKEND	.NET Minimal APIs, Node.js, Express, Firebase Functions, REST, GraphQL
DATA	PostgreSQL, SQL Server, Firestore, Supabase, EF Core, Drizzle
AI	OpenAI APIs, Whisper transcription, schema-constrained outputs
REAL-TIME	SignalR, Firebase Cloud Messaging
ARCHITECTURE	Clean Architecture, DDD, microservices, multi-tenancy
PRACTICES	Agile (Scrum), CI/CD, testing (Vitest, Cypress), i18n
PLATFORMS	Firebase, IIS, Google Cloud, Stripe, Netlify, Vercel, AWS (basic)
TOOLS	Git, GitHub, VS Code, Visual Studio, Postman, Figma

EDUCATION

Licentiate, Business Information and Communication Technologies · Universidad Invenio	Jan 2017 – Jul 2021
Thesis grade: 92	

LANGUAGES

Spanish (Native) · English (Professional)
